

PLANT YOUR PACK.

PLANTING THE WRAPPER

Use the actual paper packaging your cards came in. Follow these instructions, and soon enough you'll have apocalypse tomatoes.

1. Rip your wrapper up into pieces. Soak a single layer of seed paper in water for about 30 minutes.
2. Place your moist paper in a flower pot or planter and cover with a light layer of soil.
3. Move your pot into sunlight. Keep it moist by lightly watering daily. Your seeds will sprout in 5-10 days.

PLANTING THE TREE SEEDS

Your pack's center pocket contains eucalyptus tree seeds. Please note that eucalyptus can be invasive in moist, coastal climates, and it shouldn't be planted in areas prone to wildfires. If you live in one of these areas, please plant your seeds indoors! The seeds will germinate best at about 70° F.

1. Spread your tree seeds on top of a soil bed. Cover them with another thin layer of soil or sand.
2. Your seeds should be kept moist, but not soaked.
3. They will take about 7-10 days to sprout. If you choose to germinate them indoors, make sure you move them to a sunny outdoor area right away once they sprout.
4. Continue to water them lightly, such that the soil remains moist but not soaked.
